## Work History

### Fivver Freelancer

#### *Realtime Chat App*

Using front-end React and back-end Node.JS, this web app is an online real-time chat application. Users can make private and group chats and see real-time typing status.

### Fiverr Freelancer

#### *Study Bud*

A website made for anyone looking to collaborate, learn and help each other for any types of topics. Using Django Framework, a combination of Python, HTML, JavaScript and SQLite database integration are applied to provide an efficient Model-View-Template structure to the website.

### Personal Project

#### *To-Do List Pro*

Simple To-Do List app with authentication, REST Api, and Model-View-Template Structure.

### Personal Project

#### *Web Transfer Tool*

Techs carry inventory and consistently need to email the warehouse handler to request to transfer parts between each other. The Web Transfer Tool allows techs to sign in and restrictively choose who and what to transfer to each other. Approvals must be applied between techs so that the warehouse handler can transfer on their end.
